

Contents

1	Introduction	1
1.1	Concept behind simulation	1
1.2	The reason for simulation	3
1.3	Simulation in power electronics and the challenges	5
1.4	Python Power Electronics	9
1.5	Outline of the book	11
1.6	About the book	14
2	Introduction to Python	15
2.1	Introduction	15
2.2	Overview of Python	16
2.3	Getting Started	18
2.4	Integers, Floats and Strings	19
2.5	Lists and Tuples	23
2.6	Dictionaries	25
2.7	Examples of Python code in the simulator - Lists and Matrices	27
2.8	Examples of Python code in the simulator - Strings	32
2.9	Examples of Python code in the simulator - Dictionaries	36
2.10	Conclusions	38
3	User Interface	41
3.1	Introduction	41
3.2	Circuit representation	42
3.3	Processing of components	45

3.4	Data Structures of components	49
3.4.1	Resistor	51
3.4.2	Inductor	51
3.4.3	VoltageSource	52
3.4.4	Capacitor	54
3.4.5	Ammeter	54
3.4.6	Voltmeter	56
3.4.7	VariableResistor	56
3.4.8	VariableInductor	58
3.4.9	ControlledVoltageSource	58
3.4.10	Diode	59
3.4.11	Switch	60
3.5	Logical flow of the simulation	61
3.5.1	Launch simulator	62
3.5.2	Simulation parameters	63
3.5.3	Create component objects	64
3.5.4	Circuit parameters file	65
3.5.5	Update component parameters	65
3.6	Iterative procedure during the simulation	66
3.6.1	Simulation time instant	66
3.6.2	Update branch data	67
3.6.3	Generate input voltage	68
3.6.4	Run control code	68
3.6.5	Perform circuit analysis	68
3.6.6	Update component objects	69
3.6.7	Write output data	69
3.7	Conclusions	70
4	Interface for User Control Functions	72
4.1	Introduction	72
4.2	Inclusion of control in the simulator	73
4.3	Special variables in control code	79

4.4	Time scheduling control code	84
4.5	Interfacing control code	92
4.6	Conclusions	96
5	Case Study - Shunt VAR compensator	99
5.1	Introduction	99
5.2	Description of the circuit	100
5.3	Parameters of the simulation and the circuit	103
5.4	First stage in control development - grid synchronization	111
5.5	Second stage in control developement - current reference generation and closed loop current control	121
5.6	Final stage of control development - the entire circuit with the VSC	139
5.7	Conclusions	156
6	Nodes, Branches and Loops	160
6.1	Introduction	160
6.2	Jump labels	161
6.3	Nodes and branches	164
6.4	Short branches and nodes	169
6.5	Connectivity map for Nodal Analysis	172
6.6	Loops	176
6.7	Loop Map	187
6.8	Conclusions	189
7	Circuit analysis - Loop analysis	192
7.1	Introduction	192
7.2	Matrices for loop analysis	194
7.3	Solving the matrix equation	199
7.4	Mapping branch currents and loop currents	203
7.5	Effects of time constants on loop analysis	207
7.6	Effect of stiff loops	211
7.7	Loop manipulations	213
7.8	Limitation of loop analysis	219

7.9	Conclusions	221
8	Circuit analysis - Nodal analysis	224
8.1	Introduction	224
8.2	Concept of nodal analysis	225
8.3	Limitation of loop analysis in non-linear circuits	230
8.4	Applying nodal analysis in non-linear circuits	233
8.5	Continuing with loop analysis	237
8.6	Event driven circuit updates	241
8.7	Process flow in the simulator	243
8.8	Conclusions	247
9	Conclusions	249
9.1	Advantages of the simulator	249
9.2	Drawbacks of the simulator and scope for future work	252
9.3	Future of the project	255
